

CHAPALA STREET

STREET

BRIDGE REPLACEMENT

FACT SHEET

Project Location

LOCATION

Chapala Street Bridge over Mission Creek (near the Amtrak Train Station)

CONSTRUCTION SCHEDULE

Summer 2013 to Winter 2014

TOTAL PROJECT COST

\$3.2 Million

FUNDING

Federal Highway Bridge Program and local funds

CHAPALA STREET BRIDGE REPLACEMENT

The Chapala Street bridge is one of three bridges being replaced over Mission Creek in the Lower State Street area of Santa Barbara.

The bridge has been deemed structurally deficient by the California Department of Transportation (Caltrans) and will be replaced to meet current structural and earthquake

safety guidelines. The new bridge will be narrower, designed to complement the neighborhood better, and improve the visibility of Mission Creek.

There will be two areas of improved on-street landscaping and updated street lighting as part of the bridge replacement.

Please see the artist's rendering of the improved bridge, street lighting, sidewalks, and bridge railings on the back of this fact sheet.

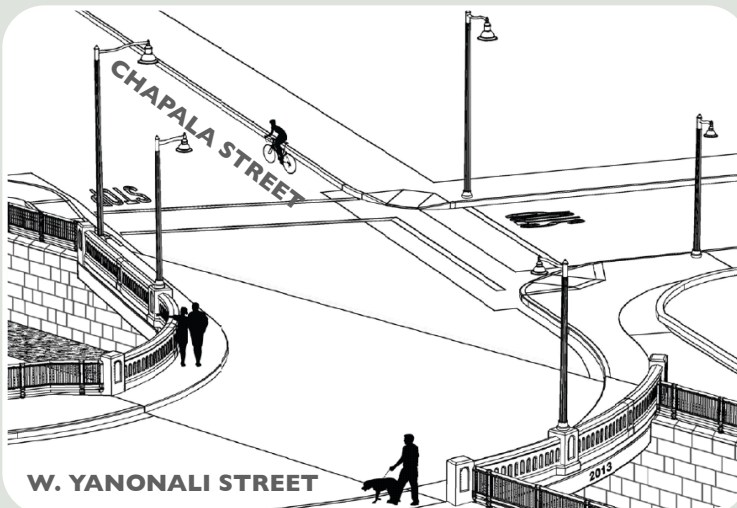

ROAD CLOSURES

- Road Closure
- Local Traffic Only
- Mason St. Closed for Summer 2013 for La Entrada Project

CONSTRUCTION CLOSURES

During construction, the intersection of Chapala and West Yanonali Streets will be closed. Local traffic will be able to use Chapala and West Yanonali Streets leading up to the bridge, and turnaround pockets will be available near the closed construction site.

FUTURE IMPROVEMENTS

Following the Chapala Street Bridge Replacement, the County will increase flood water capacity with two additional projects downstream as part of the Lower Mission Creek Flood Control Project. The City of Santa Barbara will also replace two additional downstream bridges in upcoming projects.

AREA CONSTRUCTION

Concurrent with the Chapala Bridge Replacement Project, improvements will be made along lower State Street to both private and public property as part of the La Entrada de Santa Barbara project.

City staff will review detours, signage, and truck routes to reduce neighborhood traffic impacts as much as possible during the construction of the bridge project.

CONSTRUCTION INFORMATION
